

~ VINTAGE NOTES *1983* ~

HARVEST 1983:

Vintage of perfect growing conditions with moderately large crop. April temperatures were in the high 60's; May mixed temperatures and rainfall. June was warm; July was cooler than usual and August warm and dry except for 1.6" of rain in the last four days. September and October were perfect for maturation conditions with potential for overripening. Harvest largely completed by mid-October.
